

FOUR POST RACK KIT

Features:

Bracket kit converts two 2 post racks into one 4 post assembly.

Designed for use where the security of a cabinet is not required or in high density applications where the volume of cabling requires more cable management than what can be accommodated inside a cabinet.

With a load capacity of 2000 lbs, the four post rack provides the stability of a cabinet while maintaining the accessibility of an open rack. The unit is made up of 2 two post racks and a bracket set which joins the racks together. Brackets provide adjustable depth of 25 1/2" to 42" rail to rail.

Highlights:

Modular overhead troughing is available to run cables across the top of the racks and from the front rack to the back and may be used to span various racks and cable managers. Units may be added at anytime after the initial installation with ease.

All R.F.Mote vertical and horizontal cable management may be used with this unit as well as all rack mount shelving (*2-point and 4-point*), power bars, and rack doors.

Additionally, the four post brackets act as depth members and facilitate the use of all R.F.Mote 83" height cabinet vertical cable management and powerbars. Units may also be equipped with our rack door for added security and appearance.

Modular design allows the end user to convert a currently installed two post rack to a four post rack.

PART NUMBER	Adj. Depth
RFM-FPRK	25.50 ~ 42.00

For two post racks, see page 4.1.1
